

Topping-out ceremony (30 October 2008)

In late August 2008 a topping-out ceremony was held in Kobbefjord in relation to the construction of the small field station which is going to be used as a field base for the monitoring programme Nuuk Basic.

The hut holds within 75 m² accommodation facilities for four persons and laboratory and storage facilities. The hut is powered with a 220 V generator placed in a separate building.

The construction of the building is based on means generously provided by Aage V. Jensen Charity Foundation.
